

Movie Rating System

Callback functions

Exercise 1: Uppercase Movie Genre

- **Task:** Write a function that accepts a movie object and a callback function. The callback function should change the genre of the movie to uppercase. If there isn't a genre, it should log a specific error message. If there is a genre, it should print the object with Uppercase Movie Genre.
- **Inputs:** A movie object and a callback function.
- **Example:**
 - Input:
 - Movie: `{ title: "Movie 1", genre: "action" }`
 - Callback: `upperCaseStr(genre)`
 - Output: `{ title: "Movie 1", genre: "ACTION" }`

Exercise 2: Check if Rating is Number

- **Task:** Write a function that accepts a movie object and a callback function. The callback function should check if the rating of the movie is a number. If it is, it should print a string with the name of the movie and the rating.
- **Inputs:** A movie object and a callback function.
- **Example:**
 - Input:
 - Movie: `{ title: "Movie 1", rating: 8 }`
 - Callback: `isNumber(rating)`
 - Output: `'Movie 1 has a numerical rating of 8'`

Exercise 3: Add Exclamation to Movie Title

- **Task:** Write a function that accepts a movie object and a callback function. The callback function should add an exclamation mark at the end of the movie title and then print the result.
- **Inputs:** A movie object and a callback function.
- **Example:**
 - Input:

- Movie: `{ title: "Movie 1", rating: 8 }`
- Callback: `addExclamation(title)`
- Output: `{ title: "Movie 1!", rating: 8 }`

Exercise 4: Reverse Words in Movie Description

- **Task:** Write a function that accepts a movie object and a callback function. The callback function should reverse the order of words in the movie's description. Then print the modified object.

- **Inputs:** A movie object and a callback function.

- **Example:**

- Input:

- Movie:

```
{ title: "Movie 1", description: "An exciting action thriller" }
```

- Callback: `reverseWords(description)`

- Output:

```
{ title: "Movie 1", description: "thriller action exciting An" }
```
